

“It’s nice to be able to fire up the Websense dashboard and quickly glance at which services are down, what’s working, or whether there’s a huge spike in traffic, and to be able to see that very, very quickly.”

**Mark Cho**

Manager of Instructional Technology  
Bellevue School District

## Websense Web Security

Many of today’s Web security threats are delivered by reputable Web sites. According to the 2009 Websense® Web2.0@Work™ survey, 70% of the top 100 most popular destinations on the Web hosted malicious content. Organizations that do not manage Web access are at risk. Websense Web Security™ delivers the industry’s most advanced Web security and content filtering solution to stop threats before they enter the organization, help optimize IT resources, mitigate legal liability, and increase productivity.

### Industry Leading Web Security

Websense Web Security has been recognized in independent research studies, market share reports, and by customers worldwide as the premier Web security solution. No other solution is backed by over 15 years of Web security experience, the knowledge and skills of a global research staff of 130 professionals, and the Websense ThreatSeeker™ Network.

#### Websense Web Security Offers:

- Industry-leading Web security with real-time security updates
- Advanced control over protocol-based applications
- Easy-to-use Web-based management and reporting
- Enterprise-class scalability

### Advanced Application Controls

File sharing, peer-to-peer computing, instant messaging and other applications are widely used in today’s organizations. These applications, however, can decrease efficiency and expose organizations to security risks and data loss. Websense Web Security safeguards users, preserves efficiency, and prevents data loss with hundreds of protocols covering thousands of applications, all managed with the simple check of a box.

### Simple, Yet Powerful Management and Reporting

Websense Web Security includes centralized, task-based management and reporting that integrates granular policy control with in-depth reporting. The intuitive, Web-based dashboard empowers organizations to easily create actionable reports, and includes built-in and custom reporting capabilities. Websense Web Security requires less effort to manage than competitive solutions, while providing greater visibility and control.

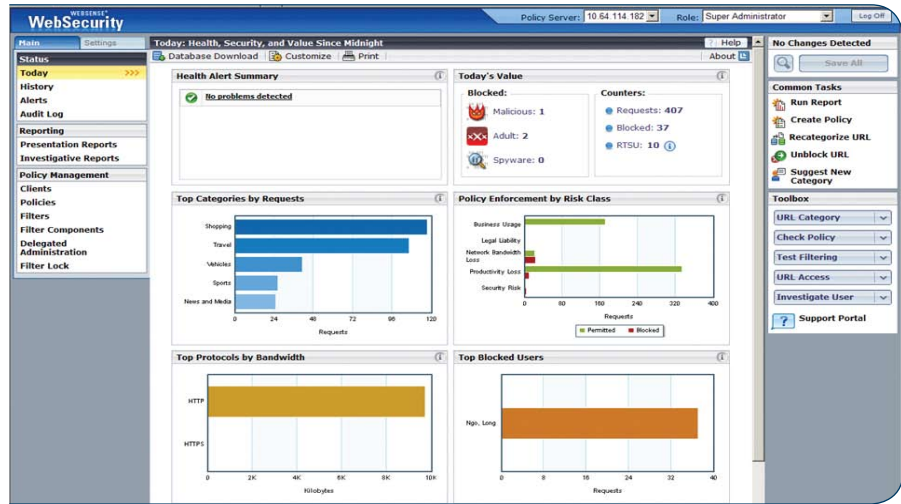

### Scalable Architecture

IT departments in expanding or distributed organizations face scalability and administration challenges not typically experienced by smaller, single-site organizations. Websense Web Security is a flexible solution—designed to expand with the organization—from 50 to 250,000 users and beyond. Centralized and delegated management and reporting options remove the burden of administrative complexity from IT resources.

WebSense Web Security Management Dashboard

Features	Benefits
<b>Proactive Web security</b>	<ul style="list-style-type: none"> <li>Shields organizations continuously from high-risk threats through real-time security updates—on average, over 100 each day</li> <li>Allows organizations to manage potentially risky Web sites flexibly by leveraging the WebSense ThreatSeeker Network's content-aware Web reputation capabilities</li> </ul>
<b>Advanced application controls</b>	<ul style="list-style-type: none"> <li>Protects users, demonstrates compliance, and manages productivity by monitoring and controlling thousands of applications using more than 130 protocol filters</li> <li>Reduces security and data loss risks by preventing users from communicating with unauthorized applications</li> <li>Saves time and IT resources—requires only a check box to activate each control</li> </ul>
<b>Centralized and intuitive, Web-based management and reporting console</b>	<ul style="list-style-type: none"> <li>Increases visibility to and reporting of Web security risks, Web use, and organizational compliance issues</li> <li>Shows instantly actionable data in an easy-to-understand format</li> <li>Implements controls with a point and click—no complicated scripting required</li> </ul>
<b>Flexible, distributed architecture</b>	<ul style="list-style-type: none"> <li>Scales from 250 to more than 250,000 users with full reliability and accuracy</li> <li>Decreases the burden on IT groups by allowing efficient security management across multiple locations, departments, or groups</li> <li>Provides increased visibility to user activities and security risks throughout the organization with distributed administration and reporting</li> </ul>

### Powered by the WebSense ThreatSeeker Network

Created by WebSense Security Labs™, the WebSense ThreatSeeker Network is the technology foundation for WebSense Web, data, and email security solutions. The network provides the intelligence foundation of Essential Information Protection™ by delivering real-time reputation analysis, expanded behavioral analysis, and actual data identification. Defensio™ technology adds Web 2.0 content analysis and classification to this intelligence foundation, providing advanced alerting to security threats and inappropriate content before Web users or crawlers visit a site. This content intelligence is central to all WebSense solutions, giving customers comprehensive and up-to-date protection from unwanted content and malicious threats.
